## Herbicide Resistant Sorghum Announcement

### **SORGHUM PARTNERS, INC. ANNOUNCES PATENT APPLICATION FOR HERBICIDE RESISTANT SORGHUM**

Sorghum Partners, Inc. has submitted a patent application for dinitroaniline resistant sorghum and has made a seed deposit supporting the patent application. Larry McDowell, President of Sorghum Partners, Inc. says: "This breakthrough in herbicide resistance in sorghum is the result of several years of concentrated effort to develop sorghum that can be rotated with (or double cropped behind) cotton and/or soybeans without fear of herbicide damage." The class of herbicides known as dinitroanilines is best known for the herbicide brands **Treflan®** and **Prowl® H<sub>2</sub>O**. Grain & cotton farmers will have the ability to break the practice of non-selective herbicides on every field every year. McDowell adds: "The best way to slow herbicide resistance is to rotate crops and herbicides." Hybrid sorghum resistant to dinitroanilines makes that rotation possible and practical. For more information contact **Sorghum Partners, Inc.** at 1-800-645-7478.
